

Extend the Span™ and flip the red tab to lock it at the desired width. **IMPORTANT:** Notice the arrows on the red slide – the direction of extending the Span™ is essential to its proper function.

To seal a dust barrier at the ceiling, snap the Span™ onto the ball joint of a ZipWall® pole, raise the pole with the attached Span™ to the ceiling, and lock it into place.

To seal a dust barrier at the floor, use Floor Adaptors. Replace the foot of the pole with a Floor Adaptor, place the Span™ on the floor, snap the pole onto it and set up the pole. *Note: A barrier can be sealed at the ceiling and floor simultaneously with one pole.*
